Carpenter Ant Treatment

We advise you to keep your doors and windows closed if you reside on the ground floor, as we are treating exterior perimeters of your building. Also you are requested to keep away from outdoor treated areas for **at least 1 hour**.

In order to get better results of the treatment, please complete the following preparations.

1. Everything should be moved 30 inches away from the exterior walls of the building (e.g. BBQ, wood, toys, etc).
2. Tree branches and vegetation should be at least 20 inches away from the wall
3. Clutter should be reduced as carpenter ants hide near moisture.
4. In case of inside treatment for carpenter ants, vacuum close to baseboards in order to remove food particles as well as from all areas of the floor. **We will have you vacate unit for 1 hour.**
5. Kitchen should be cleaned, especially under the stove, refrigerator and there should not be any food left out in the open.
6. Repair any pipe leakage and dripping taps.
7. Rotting wood in and around the house, underneath deck or in the landscaping area can be harborage area for ant colonies.
8. Note any water damage areas you have noticed in or around the home. Ex. Leaking roof, foundation leaks in basements, pipe bursts/leaking pipes etc. for point of inspection sources for ant colonies

Note: You may experience more carpenter ant activity in the next few days due to the effectiveness of the chemicals.
