Pronto pest will be entering your home \_\_\_\_\_ for the following treatment of grain weevils. Depending on the severity of infestation the technician may have to ask you step out of the apartment for a brief time on the same day visit or next visit.

## **Where are grain weevils?**

- Grain weevils contaminate products such as Flour, Corn starch, Oatmeal, Corn, Rye, Barley, Wheat, Rice, Macaroni, Spaghetti etc.

## **How did I even get Grain weevils?**

- Grain weevils are brought in to a home from a purchase of a product that has already been contaminated from the store when purchased or from where product was processed at.

## **How do we take care of the issue?**

1. On first visit **do not** empty your cupboards. We need to find which product the Grain Weevils have contaminated. All dry grain products that are contaminated or close to contaminated product will need to be removed and thrown away into the dumpster immediately.
2. Treatment will be on same day or next scheduled visit depending on amount of food product there is in the contaminated cabinet. The contaminated cabinet will need to be emptied after procedure #1 has been completed.
3. **Any new dry grain products purchased must be placed in a plastic sealed lid container! Ziploc bags are not recommended due to the fact they can be chewed through!**
  - This is to prevent any further contamination as well as in the future, this will quarantine grain weevils if new product purchased is already contaminated from store. This will save you money from not having to throw away as much food product in the future.
4. If this is your second treatment we will need the food product cabinets emptied to be able to spot treat for grain weevils.
