First Initial Roach Treatment

Date: _____

Apartment: _____ Floor/Floors: _____

Dear Resident:

Pronto Pest Management will be doing a treatment in your apartment/home for roaches. The system being utilized by Pronto Pest is, dusting, baiting, and monitoring.

Vacate the apartment before any treatment begins and must remain out of the apartment for 1 1/2 hours (90 minutes) after treatment unless otherwise specified.

We do ask that you remove all items from all lower cabinets, pull out all drawers, take everything out from under both kitchen and bathroom sinks, and the top of the refrigerator and stove, so that Pronto Pest treat adequately. All food items need to be removed from the kitchen (i.e., cereals, fruit, pet food, bread etc.). If any pets in the unit, please removed the pet bowls from the kitchen.

To help make the treatment as effective as possible we ask that you keep the kitchen area clean to help cut down on other food sources available for the insect.

DO NOT USE ANY OTHER PESTICIDES IN YOUR APARTMENT PRIOR TO OR AFTER TREATMENT! Other chemicals, sprays, dusts, etc. can affect the feeding habits of the insect and prolong the treatment process.

Thank you for your cooperation.
