## Infested Roach Treatment

Date: \_\_\_\_\_

Apartment: \_\_\_\_\_ Floor/Floors: \_\_\_\_\_

Dear Resident:

Pronto Pest Management will be doing a treatment in your apartment for roaches. The system being utilized by Pronto Pest is a bait system. You will not have to leave the apartment for the treatment to be done. We do ask that you remove items from all lower cabinets, pull out all the drawers, take everything out from under both kitchen and bathroom sinks, and the top of the refrigerator, and stove so that Pronto Pest can treat adequately. The bait is an attractive food source for the insect. We may be using dust in the treatment. We ask that you rinse off any cooking or food utensils before using. To help make the treatment as effective as possible we ask that you keep the kitchen area clean to help cut down on other food sources available for the insect.

**DO NOT USE ANY OTHER PESTICIDES IN YOUR APARTMENT PRIOR TO OR AFTER OUR TREATMENTS!** Other chemicals, sprays, dusts, etc. can affect the feeding habits of the insect and prolong the treatment process.

In accordance with CDC guidelines Pronto Pest Management is continuing to practice the 6ft self -distance protocol.

Thank you for your cooperation.
