Roach Initial Treatment

Date: _____

Apartment: _____ Floor/Floors: _____

Dear Resident:

Pronto Pest Management will be doing an initial treatment in your apartment/home for roaches.

1. We do ask that residents and all pets leave the apartment while the treatment is being conducted and remain out for **90 minutes**.
2. Remove all items from all lower cabinets, pull out all drawers, take everything out from under both kitchen and bathroom sinks, and clear the top of the refrigerator, stove, and counter tops,
3. so that Pronto Pest Management can adequately treat. All food items need to be removed from the kitchen (i.e., cereals, fruit, bread etc.).
4. If there are any pets in the unit, please remove them (cat, dog, hamster, bird, etc.) and their pet bowls. Fish and reptile tanks need to be covered with heavy thick blanket that cover all 4 sides of the tank to the bottom. Fish bubblers and reptile heat lamps will need to be turned off.
5. Upon re-entry, please clean all countertops/kitchen table/food prep surfaces with soap and water. To help make the treatment as effective as possible we ask that you keep the kitchen area clean to help cut down on other food sources available for the insect.
6. **DO NOT USE ANY OTHER PESTICIDES IN YOUR APARTMENT PRIOR TO OR AFTER TREATMENT!** Other chemicals, sprays, dust, etc. can affect the chemicals Pronto is using and prolong the treatment process.

Thank you for your cooperation.
